PUAZO 3 ANTIAIRCRAFT FIRE DIRECTOR

25X1

25X1

The manual on the PUAZO 3 (Pribor Vpravljeniia Artilleriyskim Zenitnym Ognem -- Instrument for Directing Antiaircraft Fire) outlines the purpose and characteristics of the director, its basic structure and the workings of the instrument's component parts. The manual gives instructions on corrections for height, future range, azimuth, time of flight, quadrant elevation, and type of fuse. It includes detailed diagrams and illustrations of the body of the director, its telescopic sights, wiring, electrical system, predictors, transmission system, motors, and mount.

No mention is made of any radar connections. In the only discussion of computing data for firing at an unseen target, the manual refers to data transmitted from radio and sound locators, but fails to mention any use of radar in connection with the director.
